

HW
Q. Use size of function and display the size.

* Cross check if both are same or not. Justify your answer.

```

C
#include <stdio.h>
struct Student
{
    int roll;
    char grade;
    float marks;
};

int main()
{
    int manual size;
    manual size = sizeof(int) + sizeof(char) + sizeof(float);
    printf("Manual size = %d bytes\n", manual size);
    printf("Size using sizeof() = %d\n", sizeof(struct Student));
    return 0;
}

```

Output: Manual size = 9
Size using sizeof() = 12

Manual size = 4 + 1 + 4
= 9 bytes. , Compiler adds 3 padding bytes.
