

10th HW

Q1 Find out the history of towers of Hanoi

Q2. Today, from the morning 7:30 AM to 4:30 PM.
List out Data structures in your surrounding

* 4 4000 7
Ans: The tower of Hanoi is a mathematical puzzle invented by the french mathematician Edouard Lucas in 1883. It consists of 3 rods and a no. of disks of different size stacked on one rod. The objective is to move only one disk at a time, never place a largest disc on the smaller one, and use the third rod as an auxilliary. He popularized the puzzle through the fictional Tower of Brahma Legend about 64 golden disks. Today, the Tower of Hanoi is widely used

in computer science to demonstrate recursion,
and the minimum no. of moves required to
solve the puzzle in $2^n - 1$.

Ans 2: Bus seats - Array
classroom seating - Array
College time table - Array
Roll no. list - Array
Lift queue - queue.
ATM waiting line - queue
Songs playlist - queue.
alarm in mobile - queue.
contact list - linked list
